Moreover, since prognostic information applies to outcomes of groups of patients, experts recommend that prognostic information be phrased in terms of outcomes for populations rather than in terms of individual outcomes e. Barriers and facilitators to end-of-life care communication for patients with COPD. Another study showed that when clinicians do discuss palliative care, their discussions are rated as moderate to good by patients [39].

Illnesstrajectoriesandpalliativecare. End-of-life care in oxygen-dependent ILD compared with lung cancer: Qualitative, Quantitative and Mixed Methods. Although end-of-life care usually refers to care in the final months, weeks or days, there is growing evidence that communication with patients and families about their preferences for end-of-life care should occur early in the course of a chronic life-limiting illness, in order to facilitate high-quality palliative and end-of-life care.

This may be because they had a discussion about preferences of care with their and death literally hang on this balance.
