If this fails, the entire pond will fail. You will want to place your pond where it will receive at least 4 to 6 hours of direct sun if you want to grow water lilies. Remember, this needs to be bought and installed before putting down your liner. If you are going to have water lilies they take at least 5 hours of sun a day. An aerator filter might be a filter that also helps to add oxygen. This can be placed to spill directly into the pond in which case the pond liner is held against the pond filter until you are able to stack stone from the pond shelf up against the pond filter to create a waterfall. Finally, it should be in a place where it's safe to dig, i.e. A still pond will support only a very small fish population. If a pond skimmer is being used, dig a ditch to the external pond pump and from the pump to the external pond filter or waterfall.
