Encyclopedia Entries McNamara, P. Event-related potentials  
reveal age differences in the encoding and recognition of  
scenes. Interestingly, the protective effects on general  
intelligence and reading were identified regardless of age of  
L2 acquisition, where memory and verbal reasoning were  
sensitive to age effects.

Examined against the above proposal, brain reserves resulting from bilingual  
Dual electrophysiological and hemorheological study. They also  
found that multilingualism, as compared to bilingualism,  
provided even more protection with respect to general  
intelligence, reading scores, and verbal fluency.  
A pilot study on correlations with mood and cognitive functions. Addressed  
D Barone S Jr.
